Preface

The sixth workshop on Computability and Complexity in Analysis, CCA 2004, took place on August 16–20, 2004 in Lutherstadt Wittenberg, Germany. The historical venue of the workshop was the Academy Leucorea where Martin Luther once taught theology. The program of the workshop included 19 talks which covered a broad variety of topics related to computability and complexity in analysis. This special issue contains 18 papers corresponding to these talks. We would like to thank the authors for their contributions, the program committee and the additional referees for their careful remarks and the local organizers for all their work. Moreover, we acknowledge the support of the Association for Symbolic Logic and the Academy Leucorea.
